## Skills

Shopify

Salesforce

Javascript

Next.js

SCSS

HTML

## Education

**Bachelor of Information Technology**

**2013 - 2017**

Hai Phong University

## Introduce

Hello, I'm a developer with 8 years of experience, mainly in Front-end. I've worked quite a lot with Shopify (2 years) and Salesforce SFRA (4 years), so I'm very familiar with these platforms.
In addition, I've built a few personal projects using Next.js, such as an expense management system and a portfolio site.
I consider myself a good listener, someone who enjoys supporting teammates, and I'm always open to learning new things when the job requires it.

## Work Experience

**Software Engineer** **2021 - Currently**

**Groove Technology**

- With Salesforce (SFRA):
  - Participate in developing new features, fixing bugs, optimizing, and maintaining the system.
  - Developing and editing templates (ISML, SCSS, JS).
  - Implement custom controllers, models, and services to meet business requirements.
- With Shopify:
  - Primarily working on the Liquid theme, with experience in apps/extensions.
  - Build multiple custom sections and templates according to project requirements.
  - Perform tasks with metafields regularly to expand functionality.
  - Basic experience with Shopify API/GraphQL.
  - I've been involved in custom apps and a small part of UI extension.
- Other:
  - Participate in code reviews and write guidelines for the team.
  - Contributing a small part to optimizing website performance.

**Front-end developer** **2019 - 2021**

**Rivercrane Vietnam**

- Laravel Blade:
  - Developing layouts and templates for the system.
  - Build forms and handle the display of validation errors.
- Vue.js:
  - Develop reusable components.
  - Make an API call and display dynamic data.
  - Build form validation and interactive UI/animation features.
- Other:
  - Participates in all three stages: new construction, maintenance, and optimization.

- Using SCSS and UI libraries (Bootstrap, Vuetify...).
- Participate in performance optimization (lazy loading, code splitting).

**Back-end developer** **2018 - 2019**

**K-Soft**

- Develop the back-end system using Laravel.
- Participate in database design for the system.
- Built the majority of CRUD APIs to serve the mobile app.
- Participate in the development of a portion of the authentication/authorization features.
- Implement file upload processing (small files, no complex processing required).
- Write migrations and seed data to support the development process.
- Using queues and schedulers in Laravel to handle background tasks.
- Optimize the code to improve maintainability and performance.

**Front-end developer** **2017 - 2018**

**VIAS software**

Developing a web interface using Vue.js

## Career Objective

What I'm looking for is a stable, long-term job where I can contribute, further develop my skills, and have opportunities for advancement.
